

# SUSTAINABILITY AT ROSEATE HOTELS & RESORTS

Sustainability is intrinsically a part of who we are and what we do. It is deeply embedded in the Roseate philosophy. It begins with a mindset. A commitment.

We started with **design and architecture**. We preserved the natural landscape across each of our Hotels to the very best possible. The Roseate New Delhi a verdant green oasis in the capital city, conserves more than 1000 trees. Water bodies, lush gardens, birds are a part of the fascinating ecosystem. It is a place to unwind, relax, disconnect to connect with yourself, far from the madding crowd.

The Rooms & Suites across our hotels are mindfully designed as calming sanctuaries that allow fresh air and sunlight to waft inside. The colour palette is pastel and calm, mostly earthy to induce harmony with the larger ecosystem. We aspired to build a quiet refuge from urban, city life. Our aim was to reduce the surrounding noise and unnecessary clutter, creating an austere yet warm space for reflection and introspection.

Harmony with the environment has been at the helm of everything. At the Roseate Ganges,

the focal point of each room is the view of the forest and connect with the landscape. The skylight in the bathrooms gives a feeling of being in the open and enjoy natural light throughout the day. Large balconies overlooking the verdant valley give a sense of unperturbed tranquillity and are a very prominent part of the experience. Usage of white marble and hardwood lend a sense of warmth which is juxtaposed with raw concrete plaster to take away the attention from the indoors. A sense of juxtaposition of the raw and finished, the hard and soft is apparent to create an experience of understated luxury. We've used natural materials such as hardwood, granite, marble and brass to lend warmth to the spaces. These materials have been used thoughtfully for long lasting use and give a sense of permanence.

Roseate Hotels & Resorts are **non smoking** hotels. We do not use plastic in either room amenities or straws across our restaurants. In room amenities like combs and toothbrushes are being replaced by those made with high quality bamboo. Carry bags used across our take away Cafés & Patisseries are made with certified recycled paper. We recycle waste

water. Specially designed water tanks are used to save, store and reuse water. Kitchen waste is mindfully converted to compost which is used across our organic farms and hotel landscapes. We use biodegradable bags for waste disposal and all single use plastic has been discarded as well.

The resort has installed state of the art panels that collect moisture from the atmosphere, purify it and make it safe and healthy. This in-house brand of bottled water is further hygienically packaged in glassware, replacing plastic bottles. It is treated carefully before converting into alkaline water with 8 ph value in it and blended with trace minerals.

2023 has been declared **Year of Millets**, gems from the earth that are extremely drought resistant and have amazing health benefits. Millets are now used across restaurants and cafes of Roseate Hotels & Resorts. All the produce that comes from Roseate Farms is 100 % organic. Some of the vegetables we grow at our farm, include leafy greens like spinach, mustard, lettuce, bakchoy, napa cabbage, kale and celery, radish, carrot, beet, broccoli, mangoes, ginger, fresh turmeric, mandarins and herbs like thyme, cilantro, mint, rosemary and sage. 100% of this produce is used across our kitchens. Adopting the Farm to Table philosophy seamlessly, we have signed an exclusive MOU with the Sattvik Council of India and are the only brand of hotels certified to offer **Sattvik food** and rooms. Sattvik products are free from any contamination from animal products or chemicals. Our hotels will shortly be serving Sattvik food prepared in Sattvik certified kitchens at our hotels. Going forward, we will soon have Sattvik rooms that will have linen and toiletries that are certified as Sattvik compliant.

Guests can now enjoy a refreshing array of green salad leaves, Butter head lettuce, Crisp butterhead lettuce, Red swish- chard, Romaine lettuce, Baby spinach, Oakleaf from our very own hydroponic farm. Hydroponics is a type

of horticulture which involves growing plants without soil, by using water-based mineral nutrient solutions in aqueous solvents. The seeds are sown in the selected substrate - wool rock, leca, sawdust, coconut fiber, or vermiculite to create seedlings. The seedlings germinate in the nursery and are then transferred to a place where they can grow until the plants are ready to be harvested or produce fruit.

Optimal use of **energy** is a part of our top priorities. We use solar energy for heating hot water. 80% of the hotel is designed with advanced energy conserving LED lighting fixtures. The Hotel HVAC is designed with the energy conserving Variable Frequency Drive. The Hotels are designed and fixed with Air Quality purifying TFA (Treated Fresh Air). We are converting our fleet of vehicles to hybrid vehicles to support our efforts towards sustainability and reduce our dependence on fossil fuels.

Most of our key departments are **paperless**. Very shortly, guests will be able to place an order, receive e-bills, make payment and also receive e-receipts not just for dining but for the entire suite of services. In our quest to offer unparalleled experiences and quality to our guests, an exclusive range of Roseate Tea and Coffee have recently been introduced across our hotels, that are being sourced direct from organic tea estates and coffee plantations.

Roseate Hotels & Resorts has been recognized for its commitment to sustainability and food safety. Roseate House New Delhi has been accredited with LEED Gold rating - The Leadership in Energy and Environmental Design (LEED – INDIA). The Roseate New Delhi was accredited with Greenotels 2019 Award in Silver Category. The Roseate New Delhi & Roseate House New Delhi have been accredited with the 'Food Safety System Certification- 22000 (FSSC)' by Bureau Veritas.
